

Carmen I. Bigles
President and CEO
Coquí Pharma

Carmen I. Bigles is President and CEO of Coquí RadioPharmaceuticals, Corp. (Coquí Pharma), a company founded in 2009 with the goal of establishing a medical radioisotope production facility in the United States.

Prior to founding Coquí Pharma, Bigles co-founded and served as Chief Financial Officer of Caribbean Radiation Oncology Center in Puerto Rico. The center is one of the region's premier medical facilities for advanced oncological radiation technology. Bigles oversaw the \$12 million construction of the center's first facility in Bayamon, Puerto Rico, and ensured the clinic was opened one year ahead of schedule.

It was during her time at Caribbean Radiation Oncology Center that Bigles noticed several patients coming to the clinic not properly diagnosed. She learned that this was the result of the global shortage of Molybdenum-99 (Mo-99). Recognizing that patients' treatments could be compromised as a result of the shortage, Bigles sought to learn more about the Mo-99 industry and ultimately decided to establish a domestic source of Mo-99, thus founding Coquí RadioPharmaceuticals.

Bigles was born in San Juan, Puerto Rico, and received her education in Florida and Puerto Rico. In 1997, she earned a bachelor's degree in mathematics from Interamerican University in San Juan and subsequently master's degrees in architecture and suburban and town planning from the University of Miami in 2000.

Bigles lives in Coral Gables, Florida, with her husband, Dr. Pedro A. Serrano-Ojeda, and their two daughters, Carmen Irene Serrano-Bigles and Caterina Isabel Serrano-Bigles.
