

Greg Robison, Director of Strategic Engineering, Duke Energy Nuclear

Greg has worked across the utility generation business for Duke Energy. His travels have taken him from original nuclear design to leading both nuclear and hydro relicensing programs. He is now leading the efforts to complete the Duke responses to the Fukushima accident and positioning the company's new plant efforts for the future.

Since Greg joined Duke in the 1980's out of Clemson University, he has enjoyed developing business solutions to the Business-Government-Public balance that the US energy business requires. He is currently the Director of Strategic Engineering in Duke Energy Nuclear.
